Extension LADM for spatial planning

Discussion

Questions to guide discussion

Extension is based on LADM core (Party-RRR-BAUnit/SpatialUnit, 2D/3D representations, Versioned, based on source document)

- Does it support the planning hierarchy (from national to local) sufficiently via hierarchical plan groups?
- Organizes plan units (zones) in plan block as accepted plans for specified time interval (by the relevant authorities)
- Allows documenting explicitly the required relationships between the individual plan units (and the same for plan blocks)

Questions to guide discussion

- Provide extensible code list for the spatial (sub)functions of plan unit/blocks according to national/local regulations
- Support permit registration and relating this to the relevant plan unit
- Allows open dissemination and clear visualization (3D) plan information supporting participatory plan monitoring
